Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-12 and 20-28 drawn to an apparatus.

Group II, claim(s) 13-19, drawn to a method.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The common technical features, the annular reactor with an internal rotor, is anticipated by Lija et al (US 5,188,808). As a result, no inventive exists.

3. During a telephone conversation with Mr. Mike Morgan on January 28, 2004 a provisional election was made *with* traverse to prosecute the invention of group I, claims 1-12, 20-28. Affirmation of this election must be made by applicant in replying to this Office action. Claims 12-19 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1725

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-9 and 20-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Lija et al (US 5,188,808).

Lija et al disclose an annular reactor volume with a wall and a rotor, a reactor lid, a metered addition of reactants, and means for discharge product. The external wall and rotor have circular circumference over the entire length. The means for discharge is located at the highest point of the reactor lid. The wall is geometrically designed that an annular gap widens in the flow direction (figure 3, col. 2, lines 37-60).

7. Claims 1, 10-12 and 25-28 are rejected under 35 U.S.C. 102(b) as being anticipated by GB 1 358 157.

GB '157 discloses an annular reactor volume with a wall and a rotor, a reactor lid, a metered addition of reactants, and means for discharge product. The external wall and rotor have

Art Unit: 1725

circular circumference over the entire length (figure 2). The external wall is geometrically designed such that the annular gap narrows in the flow direction and forming a single frustum (figure 2). The circumference of the rotor increases and decreases.
